

Soap carving instructions

1. Take the pattern and put it over the soap bar.
2. Take a sharp tool (toothpick works) and poke around the pattern. Don't go too deep. You just want the pattern transferred.
3. With the chisel side of your stick, shave off the outside of the object so you have a contour – (example is the middle eagle picture)
4. Then start carving the form. I am looking for form. Roundness. Don't stop at the middle picture – continue on.
5. Sand the piece – rub the piece with a paper towel. The paper towel will act like sandpaper and polish the piece. Your piece should be shiny when finished.
